Sentinel Benefits Study:
Public Authority uptake perspective
13 June 2024 - Brussels

IRISPACE

Support the sustainable development of space technologies and applications in the Brittany

IRISPACE's ambitions are based on 4 pillars:

- Research
- Training
- Innovation - Economic development
- Uses

Copernicus Régional

Context and objectives

Copernicus Régional is a regional initiative to promote the use of data from the European Copernicus program and other Earth observation data. It aims to provide assistance, mutual support and networking for the use of these data, and to initiate and support the co-construction of regional applications and services using satellite data.

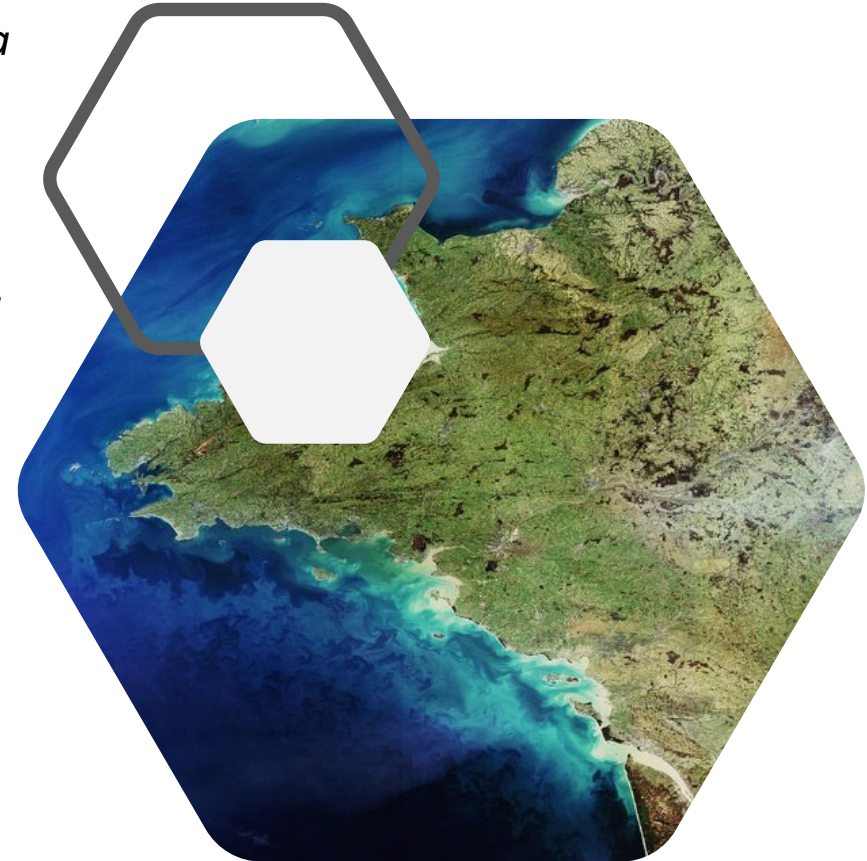

Formalize needs, understand data (images and products), offer online resources, workshops, and act as your local point of contact.

Learn how to use data: how to display it in common tools, how to interpret it, how to extract information from it.

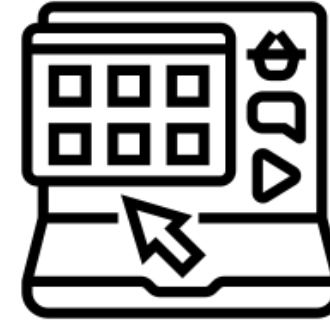

Helping to co-construct products from satellite data as part of experimental or operational projects, helping to co-construct services and applications, in conjunction with expert suppliers of space data

Copernicus Régional

FPCUP Caroline Herschel #1 & #2

- Development of the web platform on mviewer and integration into the GéoBretagne catalog <https://copernicus-regional.irispace.fr/>
- Development of POCs
- Long-term viability of the platform
- Integration of local data
- Online services (index calculations, classifications, statistics export, visualization of changes, etc.)
- Feedback from users
- Workshop and webinar
